

Remote Maintenance

Coherent exclusively offers the option of the Remote service for our contract customers particularly for the products Chameleon and compact OPO

The laser is connected via an interface to a laboratory computer on which the software is running the laser.

The PC is remotely controlled by a Coherent service technician.

Your advantage:

- Productivity maximized
- Performance improved and increased lifetime of the laser
- Minimize downtime because of fast response times
- Extended diagnostics possibility to have spare parts on-site if a visit is required.

How to reach us?

For technical support please contact our local address like Dieburg Tech Support Center:

E-Mail: Service.Dieburg@coherent.com

Hotline: +49 (0)6071 968 - 225

- Shipping time after 2 business days

P-Plus Silver

- Return Replacement
- After receiving the laser at Coherent, a replacement system will be shipped within 14 days.

P-Plus Bronze

- Depot Repair
- Typical repair time 4-6 weeks

Terms and conditions

All Chameleon laser systems which are covered under warranty or in a valid service contract at the moment are suitable for the Productivity Plus Program.

Those laser systems which are not covered by warranty or a valid service contract can only be renewed into a service contract after a system check-up.

The renewal and the system check-up need to be done within the same month. The check-up can only be done by an authorized Coherent Service-Engineer.

Prior condition to the renewal is that no modification has been done which has an impact on safety and functionality of the laser system.

Particular variations and upgrades are only allowed with Coherent spare parts and according to prior agreement with Coherent.

Normal business hours are Monday to Friday 8 a.m. to 5 p.m, unless otherwise agreed.

The basis of the contract are the Coherent General Terms and Conditions.

Coherent agrees to perform the following services within the service contract:

- meeting the specifications agreed upon purchase of the system

- free diagnostic and optimisation via remote session in case of access to an internet connection

- diagnostic and instruction regarding functionality during a service visit done by a qualified service engineer

- free field service repair including travel and labour cost for service visits within the country of a Coherent location

- special response time in case of service visits, typically within 5-7 working days

- free of charge delivery and installation of a refurbished system for replacement in case of repair not being possible at the customer's site.

- short delivery time (2 day Advance Replacement) of major sub-assembly as the most commonly used spare parts are stocked at our GLS worldwide warehouses.

Excluded from the service contract is general maintenance as well as expendable like fuses, filters and dissolvers.
